

Automated License Systems

Where Do We Go From Here?

Where Did We Come From

\$\$\$ Revenue \$\$\$

The Data Behind the Sales

- Outreach and Marketing
- Retention Studies
- Real-time access for enforcement

Integration

- Hunter Education Data
- Enforcement Data
- Harvest Reporting Data
- Biological Data

eDuck

- Technologically not that big of a step
- Culturally it could be a big step
- Could be model for future collaborative efforts (eDuck systems for all states must be compatible with Federal system)

Automated Harvest Check Systems

- Reduced overhead
- Real-time access to the data
- Many states are interested
- First step toward integration with other biological data

What We Do Can Benefit the Resource

- Ultimate goal of any information management should be to benefit the resource
- We can accomplish this by facilitating access to data and data analyses that help the managers make management decisions
- Systems need to be top-to-bottom (administration to on-the-ground-managers)
